

Ask The Dentists

Dear readers, we have had an amazing response to our Ask the Dentists Column-Thank you!

I am impressed at how many people clip these articles out and bring them into their examination visits. It's truly an honor to give important information to our patients. To that end, we have some exciting developments at Hampton Dental Associates!

First, please go to our newly updated website: WWW.HAMPTONDENTALASSOCIATES.COM

Here you can see our beautiful website version 2.0 which details our new technology, our interest free financing options as well as reading all of our Ask the Dentists columns, our monthly blog and see what's new at Hampton Dental! We have the most detailed before and after photo gallery in Wisconsin and perhaps the country as Dr. Richard Winter lectures around the country and publishes articles in the top dental journals available today and enjoys showing patients the possibilities modern dentistry has available! No matter how bad you may feel your teeth are there is ALWAYS HOPE! You will never be judged at Hampton Dental Associates as we are here to help people regardless of how embarrassed they may be about their dental condition!

At the top right side of our website are icons for Google Plus, Facebook, Twitter and YouTube! Click on these and watch our videos, see our Facebook and LIKE US on Facebook for fun cartoons, facts, videos and important dental information. I hope everyone will "Like" us so we can spread more great dental information to our Wisconsin patients.

Next, you can read about our State of the Art 10,600 LightScalpel CO2 dental laser which is the best laser for soft tissue cutting, ablation, blending and it offers less pain, faster healing, less necrosis than any other laser on the market today! We can even use it to speed the healing of canker sores and to help people that are tongue tied or need frenectomies.

Our new digital x-ray system by Dexis is the finest digital x-ray system on the market. It has far less radiation, better line pairs of resolution and amazing diagnostic ability for insuring proper diagnosis and treatment.

We have Cari-Vu! This is a game changer and can use bright light without radiation to highlight cracks, leaking fillings and decay to improve our ability to diagnose and treat problems in a less invasive fashion.

Drs. Richard and Bruce Winter

Our new intra-oral camera can further show these micro-cracks, leaking or failing fillings and openings under old crowns at an amazing resolution so we can detect problems before they get too big and more expensive to treat.

Please continue to send questions to me at: rick@winterdental.com.

If you are a patient of ours and have enjoyed your treatment we welcome reviews on all the review platforms so others can see the friendly, caring manner that our dental practice provides.

We invite all of our readers to come see us for implant consultations, cosmetic treatment and routine general dentistry. On a personal note, my daughter Ariel (a second year dental student at Marquette) gets to come to her first continuing education event with me tomorrow and I can't wait to share knowledge and learn alongside the next amazing branch in the Winter family dentist tree!

We look forward to meeting you!

Richard B. Winter D.D.S.
