

# Ask The Dentists

Dear Dr.'s Winter, what sets you apart from other dentists and why should I come to your practice?

Dear Lisa, that's a great question and if you spend some time on our new website I think we have really differentiated ourselves from other practices.

**New Technology:** We utilize the latest in digital x-rays "Dexis" to allow us to see cleaner sharper images for diagnoses. We also have a digital intra-oral camera called DexCam to blow images up on our flat panel monitors to show you exactly what we see when we discuss cavities, cracks, gum diseases, etc.

We have a new technology called Cari-Vu which uses lights to see through your tooth and capture images to give us another way to view cracks, cavities and mal-formations in your teeth!

We have a laser called lightscalpel which is the most studied CO2 laser on the market today!

Dr. Richard Winter published an article this month in the highly acclaimed Dentistry Today which highlights how this Laser is used in his advanced reconstructive dental practice to provide more comfort and better results to his patients!

Things this laser allows us to do are excision of lesions, bumps and lumps for biopsy. We can provide minimally invasive crown-lengthening to allow us to save teeth that many other dentists would simply extract. This laser allows us to treat people for being tongue tied or people that have frenia (flaps of skin that can make denture or partial denture wear very uncomfortable) by simply removing these with a procedure called frenectomy.

If you go to [www.hamptondentalassociates.com](http://www.hamptondentalassociates.com) you can read this latest article under publications as well as all of the other articles published by Dr. Winter.

Dr. Richard Winter is one of only 535 doctors in the United States to achieve the DABOI or Diplomate in the American Board of Oral Implantology as well as holding a Diplomate in the International Congress of Oral Implantologists and Associate Fellow in the American Academy of Implant Dentistry so you know we keep up on the latest information and materials to better serve our

*Drs. Richard and Bruce Winter*

dental family.

We utilize Piezo-electric devices for sinus augmentation and many other tools to insure our patients have the best instrumentation to perform their implant treatment.

But probably the best reason to come to us at Hampton Dental is that we care!

We have been serving Milwaukee through my Grandfather -Dr Morris Paschen, my father; Dr. Charles Winter and now Bruce and Richard Winter for 94 years! Dr. Bruce's son is a dentist and Dr. Richard's daughter is starting her third year of dental school in September so we have been here and will continue to be here for many years to come. We are not a dental factory where you don't know who you will see each time you come to our family dental practice.

I hope this helps! We would love to have you join our dental family.

All the best,

Dr. Richard and Dr. Bruce Winter
